

University of Oklahoma introduces various types of technology to students, including virtual reality.

DESIGN THINKING

Stanford University Law School

Design thinking has become a buzzword in academia, and Stanford Law School is leading the way in legal education. The concept is that you use logic, imagination and systemic reasoning to solve complex problems. The law school combined forces with Stanford's d.school, which focuses on design and creative thinking, to create the Legal Design Lab.

The program combines the efforts of lawyers, technologists and designers to create a new generation of legal products and services. It hosts workshops and teaches classes on how design and technology can be used to solve problems in the legal world.

Some of the lab's previous projects have included Navocado, a platform of interactive guides to court processes, and the Court Messaging Project, which offers open-source messaging software that courts can use to send automated messages to clients, reminding them to attend court appearances.

Brigham Young University - J. Reuben Clark Law School

Brigham Young University recently

launched LawX, a legal design lab that will use design thinking to address issues surrounding access to justice. The course is structured like an idea incubator and will be run like a startup.

Design thinking does not necessarily entail a technological solution. Rather, it is an approach that can be used in all areas of legal practice, explained Kimball Parker, a Utah lawyer who will lead LawX. Design thinking involves rapid prototyping and testing, allowing the designer to find elegant solutions to complex problems.

"We want our law students not just to be experts in the legal system as it is but to aggressively think about how to make the system better," said Gordon Smith, dean of the law school.

BYU Law's Parker and Smith

For their first project, students participating in LawX will develop automation software to assist pro se defendants in responding to complaints. The final product will help defendants respond to a lawsuit and avoid a default judgment.

Suffolk University Law School

Robotics, automation and big data may take over many tasks currently performed by lawyers, but that doesn't scare Andrew Perlman, dean of Suffolk University Law School. He sees these new technologies as presenting opportunities for lawyers to practice at the top of their license.

Through the law school's legal technology and innovation concentration, students learn to adapt to changes in the legal industry with cutting-edge legal skills, such as automated document assembly, legal project management, design thinking and virtual lawyering. Students also have the opportunity to use their expertise in the law and technology to build new legal tools and develop innovative legal services.

"We want to know how we can make the delivery of legal services better, faster and cheaper," Perlman said. "If we do that, then we can reach new consumers and make lawyers more competitive."

ENTREPRENEURSHIP

University of California Hastings College of the Law

Just 40 miles north of Silicon Valley, UC Hastings has created its own innovative program. The Startup Legal Garage is the flagship program of UC Hastings' Institute for Innovation Law. It provides cutting-edge research on topics such as drug pricing, patent trolling and artificial intelligence.

Each year, 50 law students provide corporate and intellectual property work for early-stage tech and life science companies

under the supervision of local attorneys.

The Startup Legal Garage teaches students to become partners in enterprise and more than just "the lawyer in the room." In this approach to legal education, students bring their deals into the classroom, which allows faculty to harvest hypotheticals in real-time and bring the teaching of legal doctrine to life.

Albany Law School

Want to work with real-life technology entrepreneurs with marketable ideas? Students participating in Albany Law

University of California Hastings College of Law student Natasha Iyer working alongside UC Berkeley bioengineering professor David Schaffer.

School's Entrepreneurship Law in Emerging Technologies program have an opportunity to do just that.

Students are tasked with identifying the legal challenges that entrepreneur clients encounter and finding solutions. Students

Greensboro, North Carolina

BRINGING INNOVATION TO YOUR EDUCATION.

UNT Dallas College of Law is proud to be recognized as one of the Most Innovative Law Schools in America. Just one example: we use multiple assessments throughout every course to determine your grade – not just a final exam, as happens with more traditional law schools. So you and your professors will know how you're progressing and where extra emphasis can support your success.

Our students also appreciate our dynamic downtown Dallas location, our diversity, our focus on preparing to practice in the real world, and, especially, our commitment to value and reasonable cost, so our graduates can start their careers unburdened by unreasonable debt.

June 30: Deadline for fall applications

UNT Dallas College of Law is provisionally approved by the American Bar Association's Council of the Section of Legal Education and Admissions to the Bar. Graduates of a provisionally approved law school are considered by the ABA to be graduates of an ABA-approved law school and are eligible to sit for most bar exams, including in the state of Texas.

Questions may be directed to the Section of Legal Education and Admissions to the Bar, American Bar Association, 321 N. Clark Street, Chicago, IL 60654 or call (312) 988-6738.

COLLEGE of LAW

not only receive instruction on business development and intellectual property but also learn the science behind new technologies so they can practice in a rapidly emerging field.

Vanderbilt University Law School

Vanderbilt Law School launched its Program on Law and Innovation, or PoLI, in 2015 to train its students to be innovators in the legal profession. Students participating in the program learn about new legal business models, technologies such as artificial intelligence, entrepreneur skills and how increased efficiency can widen the availability of affordable legal services.

Professor J.B. Ruhl, who directs the program, said programs of this type are the future of legal education.

"I don't see how you could envision a law school not having something going on inside that has a lab-like atmosphere exposing lawyers to modern-day practice," he said.

TECHNOLOGY AND BUSINESS

Chicago-Kent College of Law at Illinois Institute of Technology

Tomorrow's lawyers will need a fundamental understanding of the market forces affecting the business of law, as well as skills in technology, process improvement, analytics and workflow optimization, professor Dan Katz said. For students at Chicago-Kent College of Law, these skills have been incorporated into their law school curriculum.

Katz is the director of the law school's

Law Lab, a teaching and research center focused on legal innovation and technology. The Law Lab positions its students for success in traditional law practices and alternative legal markets by using innovative technology and business processes to solve legal issues.

Chicago-Kent also offers a Justice and Technology Practicum in which students can gain experience with document assem-

bly and automation tools. Throughout the semester, students research real-life justice problems and use cloud-based A2J Author software to break down complex legal information in a straightforward way for self-represented litigants.

University of Washington School of Law

Located in Seattle, the fastest growing tech city in the U.S., University of Washington School of Law is well positioned to offer innovative student experiences in global business and technology law.

The global business concentration offered through the law school's Global

Kristopher Clemmons, corporate counsel at Starbucks, is a mentor at UW School of Law.

Business Law Institute gives students a chance to learn about the challenges of the global legal marketplace and what can be done to meet those challenges. The curriculum and training is developed in collaboration with the institute's advisory board, which includes executives from Amazon, Microsoft, Boeing and Starbucks.

"It's the support from these leading global companies and firms that makes the institute so remarkable," said co-director Scott Schumacher, associate dean for academic administration. "We are collaborating with those on the cutting edge, learning what training and skills are necessary for global business lawyers to succeed."

Northern Kentucky University – Salmon P. Chase College of Law

The W. Bruce Lunsford Academy for Law, Business + Technology at Northern Kentucky University equips students to deliver legal services that incorporate traditional legal knowledge, business analytics and efficient use of technology.

The academy also emphasizes growth areas such as intellectual property and privacy, provides instruction in business analytics and informatics, and introduces students to legal and consumer technology.

Classroom instruction extends beyond traditional law school methods, giving students hands-on experiences in drafting and editing intellectual property documents and creating apps that can be used to expedite legal proceedings.

University of Miami School of Law

Imagine the possibilities if you were able to bring the global marketplace into a law school setting. University of Miami's LawWithoutWalls (LWOW) does just that.

"We are changing the way we train future lawyers and also the way lawyers practice," said Michele DeStefano, founder and director of LWOW.

LWOW students and supervising attorneys communicate with one another from

around the world, identifying issues and finding solutions to corporate, legal and justice issues. The program lasts four months, culminating in real solutions at the intersection of law, business and technology, DeStefano said.

“We are creating new products, new services and new ways to do business, as well as increase efficiencies in legal departments or law firms,” she said.

TECHNOLOGY AND DIGITAL TOOLS

University of Oklahoma College of Law

From day one, students at University of Oklahoma are immersed in tech. As part of the law school’s Digital Initiative, all students work from iPads and use digital tools

University of Oklahoma’s computer lab, where students learn how to use new digital tools to research, organize and present information.

to research, annotate, organize and present information on a digital platform.

Sure, most law students in 2017 are savvy enough to find their way around an iPad. But the University of Oklahoma teaches its students to use digital tools such as cloud computing, Dropbox and e-book publishing to increase efficiency and efficacy. In other words, the school creates students who can increase the value of their time and services — a skill desired by law firms and legal departments.

Cornell Law School

Want to spend an entire semester in New York City exploring legal issues related to information technology, such as privacy, cybersecurity, regulation and constitutional law?

Students who participate in Cornell's Program in Information and Technology Law do just that. Spending a semester taking courses at Cornell Tech on Roosevelt Island in New York City, students learn about the substantive legal issues arising

from new technology.

"The program provides an exciting new way for our students to study this important area of the law in the heart of the fastest growing tech market in the country," said Eduardo Peñalver, the school's dean.

ACCESS TO JUSTICE

University of Minnesota Law School

Not all legal education innovation comes in the form of design thinking, technology or entrepreneurship. Some law schools, such as University of Minnesota, are finding new ways to train and secure the public servants of tomorrow.

The Minnesota Law Public Interest Residency Program connects leading public interest and government organizations with high-achieving law students. Participating students work full time during their third year for a nonprofit or government agency. Students who complete the program have a guaranteed, full-time legal position with the same organization following graduation.

Duke University School of Law

Duke University is staking its place on the frontier of legal innovation through multiple legal tech initiatives, including its Access Tech Tools. This clinic allows students to develop tools to expand access to legal services. Duke University also has an incubator, the Duke Law Tech Lab, which leverages the university's faculty, students and alumni to support innovations in the delivery of legal and regulatory services.

PRACTICAL TRAINING

Elon University School of Law

Elon University has introduced a new curriculum that requires a full-time, course-connected placement for every student. The Residency Program is designed to provide students with experiential learning and real-time feedback from lawyers and judges.

In the program, second-year students work 32 to 36 hours per week during a 10-week trimester. A learning plan is developed by the supervising attorney and faculty members to increase proficiency in at least two legal skills.

Valparaiso University School of Law

During the spring semester at Valparaiso University, first-year students take Introduction to Experiential Learning, a course designed to link legal doctrine to real-world practice.

The course builds on the lessons that students learn in their first-year courses, culminating with rotations that are similar to medical school clinical rotations. During each rotation, a client is paired with a team of law students who work to address the client's question.

"This breaks through the wall of bringing experiential learning to first-year students," said Derrick Howard, associate dean of experiential learning.

The program allows students to test their knowledge prior to final exams, as well as hone soft skills such as interviewing, active listening and counseling.

And the clients? They are lawyers who evaluate the students' performances and provide feedback.

Regent University School of Law

Through Regent Law's Integrated Lawyer Training, students participate in a number

rigorous education
northwest lifestyle

Lewis & Clark Law School
#1 Employment Among Oregon Law Schools

of opportunities designed to enhance their legal education through hands-on training and ethical formation.

Students learn workplace skills, such as basic accounting principles and technological competence with e-discovery, e-filing and other cutting edge law office technology. Third year students also have the opportunity to participate in a for-credit apprenticeship, where they work and study under an attorney while taking online coursework.

The aim of these new initiatives? To create graduates ready to integrate into a 21st legal profession.

OTHER INNOVATIVE PROGRAMS

University of North Texas at Dallas College of Law

Founded in 2013, UNT Dallas College of Law is forging its own path. The public law school, which has the lowest tuition in Texas and has one of the nation's most

diverse student bodies, is forgoing the traditional law school model of one final exam or paper. Instead, all courses include multiple quizzes and assessments to keep track of students' progress and catch those who are falling behind early enough to support them through each semester.

Mitchell Hamline School of Law

When it comes to online legal education, Mitchell Hamline is leading the charge. The law school began its Hybrid J.D. program in 2015 after receiving ABA approval to conduct 50 percent of its courses online. Students come from all over the country to participate in the program. Many of them are also working full time.

The law school recently announced an Executive J.D. enrollment option. Similar to the Hybrid J.D. program, students attend class on campus twice a semester and perform the rest of their coursework online. There are also additional leadership workshops.

Georgetown University Law Center

Most students go to law school without a background in science, math or engineering, but that should not stop them from pursuing an interest in legal tech. Students at Georgetown University have the opportunity to learn beginning and intermediate computer programming as well as participate in the law school's Iron Tech app-building course.

Georgetown University's computer programming courses teach easy-to-learn and powerful programming languages. Students learn how to assess quantitative data and sift through complex databases using simple programming techniques. The concepts students encounter shed light on substantive issues of legal practice such as privacy, intellectual property and consumer protection.

Students participating in the Iron Tech course also gain technical skills by working with nonprofits to create apps that facilitate access to justice. At the end of the program, a panel of judges chooses the best app.

MORE THAN A LAW DEGREE A GREATER DEGREE OF IMPACT

Western New England University is a rigorous training ground for future lawyers in a region ripe with opportunity. Here, you will gain more than just a law degree, you will acquire the skills and knowledge to make an impact, along with a network of connections to help you launch a rewarding career.

More Personal. More Fulfilling. More Impactful.
